DigiPrint

Our full colour digitally printed patches showcase vibrant and detailed designs. Unlike traditional embroidered patches, full colour digitally printed patches are created by printing graphics directly onto specially engineered fabrics designed for producing the highest quality of emblems with complex designs. With our G7 colour certification, high quality fabrics, and experienced printing knowledge and methods we can produce extremely high-quality products.

Fabric Types:

JA-Fabric

The unique feature of this fabric lies in its metallic & shimmering finish. This material visually mimics an embroidery effect but is smooth, soft, and feels like silk.

Soft Felt

Mimics the feel of plush mink fabric and is extremely soft.

DigiPrint x Satin Border

Soft Twill

Soft Felt

This decoration method can be created with any of our fabrics except for FA. Using our printing method for Digiprint, we are able to combine it with a full merrow border to give it an embroidered look while achieving fine details and even gradients in your logo.

DigiPrint Stock Twill & Flock

We carry a variety of stock twill colours and flock material which we can digitally print vibrant and detailed designs. Unlike our traditional embroidered patches, full coloured digitally printed twill and flock patches are created by using pigmented ink printing process producing the highest quality of emblems with complex designs.

Stock Twill

Stock Flock

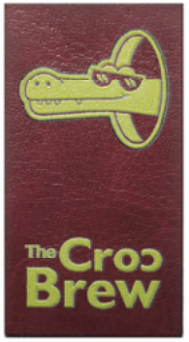

Clip Labels

Fabric

Suede

Leather

Clip Labels are perfect for customizing any type of apparel. We are able to produce these clip labels in any of our fabrics, faux suede, faux leather, and stock twill.

Digi3D & Glow in the Dark

PU

Glow in the Dark

Using the latest printing technology, our team can easily recreate any design with 3D texture. This adds a whole new look and feel to any logo. Elevate your brand with texturing and elegant finishing with eye catching colours and details. Our extensive expertise in colour, combined with our G7 Colour Certification, enables us to produce high-quality textured products featuring vibrant colours, smooth gradients, exceptional clarity, and precise colour matching.

DigiStitch Hybrid (Printed + Embroidered)

These emblems and patches are a combination of our famous DIGIPRINT and Embroidered Patches. Certain portions of the logo can be embroidered to give a 3D look and texture. The background of the patch is printed in full vibrant colours, with embroidery added on top to create a unique decoration method with dimension and texture.

** PLEASE NOTE THAT A CIRCULAR PATCH IS NOT POSSIBLE WITH THIS DECORATION METHOD*

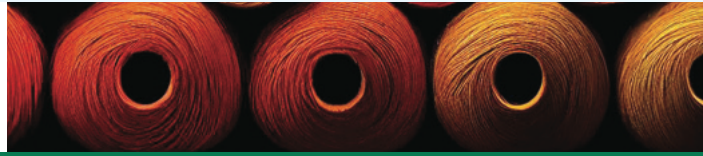

Embroidered Patches

These patches give a high-quality look achieved from direct embroidery without using the traditional direct embroidery method. Embroidered patches are timeless and have a very classic look.

Using the latest embroidery machines and top quality ISACORD threads on imported fabric bases, we can create high-quality embroidered emblems that sets us apart from the market.

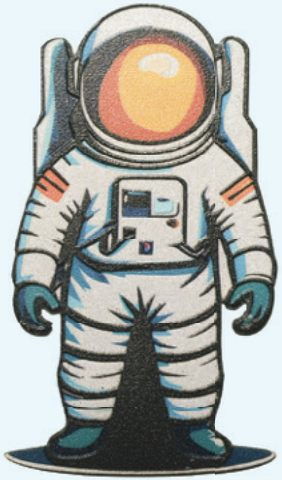

Hi-Vis

Made from materials that are certified for use in industrial safety applications, these high visibility patches are fluorescent for higher frequency under light.

Printed Reflective

Made from materials that are certified for use in industrial safety applications, these reflective patches are printed in full colour being able to achieve any design that is required.

Fabric x Silicone & Double Layer Fabric

PU/Silicone with Fabric

Double Layer Fabric

This is a combination of our traditional Digiprint and stock silicone/flock. We combine eco-friendly silicone, polyurethane, or flock with high quality fabrics to achieve depth for your logo. This decoration method is best for text only logos or logos with simple designs. Our double layer fabric achieves the same look but is made with fabric for the top layer.

This process is not suitable for all types of emblems, please contact us with your artwork so we can determine if this decoration method is possible for your design.

Specialty Stock Transfers

Reflective Transfers

Using high quality reflective material, these transfers add a unique feature to your design. Perfect for use during the day & night due to its high visibility functionality.

Silicone Transfers

This product is made by using a high-quality silicone or polyurethane material, ideal for creating smooth & durable designs that stand out.

Flock Transfers

We use a wide variety of stock colours to produce flock transfers that have a soft texture.

Faux Leather & Genuine Cork

Using digital printing methods, we can easily achieve high quality detail and vibrant colours on faux leather and genuine cork. In addition, we also laser etch these materials to gain varying depth to gain a unique look. Our faux leather is made from eco-friendly synthetic materials that mimic the feel of genuine leather. These patches are available in a variety of stock colours.

Laser Etched Faux Leather

Printed Faux Leather

Genuine Cork

Faux Suede

Using digital printing methods, we can easily achieve high quality detail and vibrant colours on faux suede. Laser etching can also be used on these materials to achieve stunning textures and varying depth for your custom design. These patches can achieve high detail and are available in a variety of stock colours.

Printed Suede

Laser Etched Suede

2 Layer Silicone

Our two-colour patches can easily achieve high detail and intricacy. They are light weight and are perfect for any type of apparel. Two colour silicone patches come in many stock colours, but the top colour is always black OR white. This material is best suited for two colour logos. Being a new decoration method in the industry, this material makes any logo stand out.
